

Pygmalion

SharePoint 2010 Solutions

Pygmalion Overview

Pygmalion has been working with SharePoint technologies since its first release, and we have implemented many customer solutions.

We are a Microsoft Gold Partner with competencies in Advanced Infrastructure, iWorker Solutions and Learning Solutions.

We are authorised by Microsoft to redeem Software Assurance Benefits - against the costs of Packaged Services, a set of consulting services that includes Desktop Deployment Planning Services (DDPS) and SharePoint Deployment Planning Services (SDPS), to assist companies to plan and deploy desktops and/or SharePoint.

The company is certified to ISO 9001:2008, the internationally recognised quality assurance standard – by the BSI (British Standards Institution) Registration No: FS 73185

Overview of Microsoft SharePoint 2010

Microsoft SharePoint 2010 is a business software platform with 6 key capabilities.

Sites provides a single infrastructure for all your business Web sites. Share documents

with colleagues, manage projects with partners, and publish information to customers.

Communities delivers great collaboration tools—and a single platform to manage them. Make it easy for people to share ideas and work together the way they want.

Content makes content management easy. Set up compliance measures “behind the scenes”—with features like document types, retention policies, and automatic content sorting—and then let people work naturally in Microsoft Office

Search cuts through the clutter. A unique combination of relevance, refinement, and social cues helps people find the information and contacts they need to get their jobs done

Insights gives everyone access to the information in databases, reports, and business applications. Help people locate the information they need to make good decisions

Composites offers tools and components for creating do-it-yourself business solutions. Build no-code solutions to rapidly respond to business needs.

Pygmalion SharePoint Solution Offerings

Pygmalion provides a complete solution encompassing envisioning, planning, deploying & project management for SharePoint based solutions.

Phased Approach for the complete solution

We take a phased approach to developing your solution based on Microsoft’s proven approach to technology projects, the Microsoft Solutions Framework. Providing a customer solution roadmap consisting of five phases.

Advanced Infrastructure Solutions
Information Worker Solutions
Learning Solutions

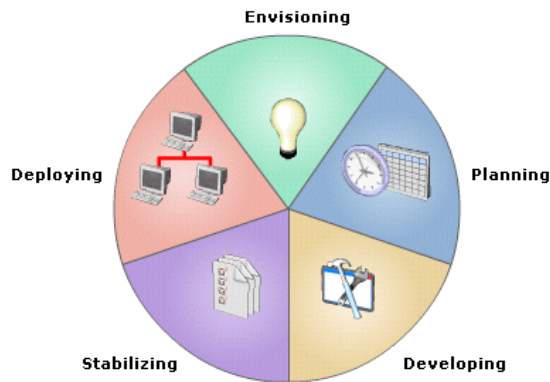

Certificate number: FS73185

SharePoint 2010 Solutions

Customer Solution Roadmap

Envisioning – Determine the overall vision and high-level business requirements; the major deliverables & functionality; solution concept; critical delivery dates; high level risks

Planning - Determine the information architecture; site hierarchy, navigation; infrastructure design, security architecture; branding requirements; project plans; and detailed project risk analysis.

Developing - Develop the business solution implementing the planned designs and architectures. SharePoint with its extensive functionality, typically requires minimal software code development, and inherently allows an agile methodology to be used, giving both ease of rapid development and implementation of changes to business requirements.

Stabilizing – Conduct user acceptance testing; test solution with estimated peak workloads; test work-flows.

Deploying - Deploy the solution into the production /business environment; provide training to end-users and IT support personnel; survey customer /end-user satisfaction

Other Service Offerings: Content Indexing & Search

SharePoint provides the functionality to index external sources of content, such as external web site, intranet, file systems, databases. We can assist you in putting in place the best indexing strategy to adapt with the appropriate search engine, to suit the way your users work.

Migration - Pygmalion can assist you in the migration of your existing documents to the SharePoint Document Management system, and web content to SharePoint Sites.

Deployment /Migration to Microsoft Cloud Services - We can assist companies to deploy or migrate the SharePoint solution to Microsoft Cloud Services to operate in an hosted environment.

Web Parts - Web parts provide additional functionality and capability to SharePoint. For a given set of requirements Pygmalion can advise on third-party web parts or develop a customised web part.

Workflow Applications - We can design and develop workflow applications that match your business requirements.

Training and Knowledge Transfer - Technical training is offered to provide the skills to develop, deploy and administer. In addition end-user training is offered to address the benefits of collaborative working and how to apply it to everyday tasks.
